R&K INCINERATOR, INC.

## BURN-EASY CREMATORS

The easy, economical method of dead animal disposal.

These cremators feature unique spiral flame action that travels the full length of the burn chamber for a cleaner, more complete burn. The patented solid-state heat control thermostatically cycles the burner to maintain optimum burn temperature and reduce fuel consumption by up to 65% (approximately one gallon per hour).

- Patented, special insulating refractory block liner reflects rather than absorbs heat, acting like an additional burner for hotter, more uniform disposal
- Easy to use – simply load, set the heat control timer & walk away
- Reduces 100 pounds of carcass to less than 1 gallon of ash
- Pollution-free disposal meets or exceeds EPA guidelines & virtually eliminates biosecurity hazard concerns
- Burning destroys potential spread of disease & keeps rendering trucks off your property
- Heavy-duty cremators are built tough to last under the most extreme conditions
- Shells are constructed with heavy-duty 3/8" to 1/2" heat tempered, continuous welded steel for maximum strength
- Units are reinforced with 1" x 2" bars for extended life
- Pre-cured liner withstands temperatures of 3,000° F for extended cremator life
