Date: 05/31/2024

To: HLWW School Board

From: Joe McKee, Director of Buildings & Grounds

I recommend that the board approve the revised lead in water plan. The revisions made to the plan are to be effective July 1, 2024, and will keep the district in compliance with the changes that the MN Department of Health has made.

The changes include:

- Dropping the maximum allowable tolerance from 20ppb to 5ppm.
 - o All of the district's current facilities will meet the new requirements based off of previous testing.
- Changes to the mandatory action responses.
 - o The district's current response includes adding filtration and retesting individual fixtures that would test high.
- There are also forthcoming changes to the requirements for notifying the community and MDH with results from our testing.
 - o MDH has yet to release this information; Resource Training and Solutions is keeping the district abreast of any information released.

The district is currently on a 5-year cycle with one facility being tested each year, this will remain the same with the high school due this next year.

Thank you

Joe McKee,
Director of Buildings and Grounds
