Subject: Server Purchase

---

The Technology Department is requesting Board approval to purchase two new Dell servers to support critical district technology infrastructure. The proposed purchase includes one Tier 2 district storage server and one backup server.

The district's existing servers that currently perform these functions were purchased more than eight years ago. These systems have exceeded their expected life cycle and are no longer covered under warranty. Additionally, Cisco has discontinued support options for these servers, making it impossible to extend service contracts or obtain manufacturer-backed hardware support.

Because these systems serve essential roles in district operations, maintaining reliable storage and backup capabilities is critical. Replacing the aging equipment will improve system reliability, reduce the risk of service interruptions, and ensure continued protection of district data through robust backup solutions.

During the evaluation process, the Technology Department encountered significant pricing volatility in the technology hardware market, particularly related to memory and server components. As a result, we shifted our focus from Cisco solutions to Dell systems in order to obtain comparable hardware that meets the district's needs at a more affordable cost.

The district solicited quotes from two vendors in response to our request:

- People Driven Technologies
- Charter Technologies

After reviewing both proposals, the Technology Department recommends proceeding with the purchase through People Driven Technologies at a total cost of **\$45,035.72**. This pricing includes a comprehensive five-year Dell hardware service agreement for both servers, providing manufacturer support and warranty coverage throughout the service period.

It is important to note that since initiating this procurement process approximately two months ago, pricing for these same server configurations has increased by more than **\$6,000** collectively. Based on ongoing market conditions and discussions with multiple technology vendors, we do not anticipate hardware prices returning to previous levels in the near future. Delaying this purchase may result in additional cost increases and further expose the district to risks associated with aging, unsupported equipment.

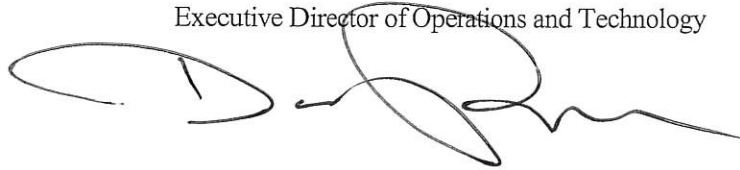

**Recommendation:**

The Technology Department recommends that the Board of Education approve the purchase of two Dell servers from People Driven Technologies in the amount of **\$45,035.72**, including the five-year Dell service agreement.

Thank you,

David Payne

Executive Director of Operations and Technology
