# 1 INTRODUCTION

*This report is a **preliminary** report that contains only the data collected locally. Your full report, which will contain comparisons to state level, data will follow once the state dataset has been aggregated and weighted. The full report will also contain many more sections with more indepth and detailed information on your data.*

The 2009-10 Oregon Student Wellness Survey was administered to Oregon youth in grades 6, 8 and 11 in March and April of 2010. The survey was conducted by the Oregon Department of Human Services who contracted with International Survey Associates to manage the recruitment, administration and reporting of the survey results. Schools who agreed to participate in the *Oregon Student Wellness Survey* were given the option of administering the survey either online over the Internet or by paper and pencil with the schools determining which method would be best for their particular circumstances.

The *Oregon Student Wellness Survey* was designed as a split survey. The 6th grade version of the survey consisted of a subset of the questions found on the 8th and 11th grade versions of the survey. In order to provide results that spanned all grade levels in a single report, the data for questions that did not appear on the 6th grade version were coded as missing.

The data collected by the *Oregon Student Wellness Survey* covered a wide range of topics which included drug and alcohol use, perceptions, behaviors, and risk and protective factors that impact substance use, gambling behaviors, positive youth development, school climate issues and student mental health.

## 2 DRUG-FREE COMMUNITIES SUPPORT PROGRAM: COMMON CORE MEASURES

The Drug-Free Communities Support Program, administered by the Center for Substance Abuse Prevention, requests specific data which are typically referred to as the Core Measures. The drug categories measured are tobacco, alcohol and marijuana; the data in tables are provided by grade level. For each drug, and at each grade level, the percentage of students who responded positively to the question and the number of students who responded to the question are reported. For *Age of Onset*, the average age of first use for those students who reported using is reported. The Past 30 Day use tables also include the drug categories of stimulants and any illicit drug (i.e. any drug other than alcohol and tobacco). The question of availability is not part of the Core Measures but was included here at the request of the Oregon Department of Human Services.

**Past 30-Day Use** The question *On how many occasions have you used ... in the past 30 days?* is used to measure this statistic by reporting the percentage of students who report any use in the past 30 days.

**Perception of Risk** The question *How much do you think people risk harming themselves if they ...?* is used to measure this statistic by reporting the percentage of students who report that using the drug is a *Moderate Risk* or a *Great Risk* to their health.

**Perception of Parental Disapproval** The question *How wrong do your parents feel it would be for you to ...?* is used to measure this statistic by reporting the percentage of students who report that parents would feel it is *Wrong* or *Very Wrong* to use tobacco, alcohol and marijuana.

**Age of Onset** The question *How old were you when you first...?* is used to measure this statistic. The possible responses to this question range from *10 or Under* to *17 or Older*. The table shows the average age of onset of use by those students who answered the question with a response other than *Never Used*.

**Availability** The question *If you wanted to get some ... how easy would it be for you to get some?* is used to measure this statistic by reporting the percentage of students who report that getting tobacco, alcohol, marijuana, or some other drug such as cocaine, LSD, etc. would be *Sort of easy* or *Very easy* to get.

## A FREQUENCY DISTRIBUTIONS

This section contains basic frequency tables for all questions found on the *Oregon Student Wellness Survey for Grade 6* and *Oregon Student Wellness Survey for Grades 8 and 11*. The *Oregon Student Wellness Survey for Grade 6* consisted of a subset of the questions found on the *Oregon Student Wellness Survey for Grades 8 and 11*. The wording of the questions was exactly the same between the two forms with the exception of the six school climate questions regarding harassment. The *Oregon Student Wellness Survey for Grade 6* used a shorter and simpler syntax that was better suited for students at that grade level.

The frequency distribution tables report on how the students responded to the questions on the survey and consists of one table for each question. The tables appear in approximately the same order as the questions on the *Oregon Student Wellness Survey for Grades 8 and 11* questionnaire (the order of questions for the *Oregon Student Wellness Survey for Grade 6* is generally the same as the *Oregon Student Wellness Survey for Grades 8 and 11* but, as it is a subset, the order is not exactly the same). The tables include breakdowns by grade level as well as overall percentages for each question. The *N of Valid* row is a frequency count of the number of valid responses to each question for each grade and overall. The *N of Miss* row is a frequency count of the number of invalid (marked more than one response) or missing (i.e. did not respond) responses to each question for each grade and overall. Since the *Oregon Student Wellness Survey for Grade 6* consisted of a subset of questions from the *Oregon Student Wellness Survey for Grades 8 and 11*, there is, of course, no data for those questions found only on the *Oregon Student Wellness Survey for Grades 8 and 11*. Questions that do not appear on the *Oregon Student Wellness Survey for Grade 6* were treated as missing data and ignored for calculation purposes. This was done to allow the Grade 6 data and the Grade 8 and 11 data to be combined into a single report. It has no effect on the grade level or overall percentage figures for the questions involved since these percentages are based on only valid responses.

For the questions that allowed a student to mark more than one response (i.e. alcohol and gambling experience) each response becomes a separate table. If a student did not mark the response, that was counted as a NO response, and if they did mark the response, that was counted as a YES response. Since a non-response is a valid response for these questions, the *N of Miss* will always be zero for these questions.
