Our Take (from the SES Sales Team)

Once upon a time, if you owned a large warehouse with both dirt and debris as part of your daily operations, there were two ways to clean it. The first was to use a ride-on Sweeper Scrubber powered by propane, which handled most of your cleaning but left you with propane emissions. If you were in an area that was not well-ventilated or if you used the warehouse as a commercial space, this could create a problem. To fix this, you could buy two separate pieces of equipment, both battery-powered—a sweeper and a scrubber—increasing your costs by 25-75%. For those in this situation, I'd like to introduce you to the Tennant M17 Sweeper-Scrubber. With a 48-inch cleaning path, the M17 can handle all the challenges that previous sweeper-scrubbers could, while reducing exhaust fumes, making it ideal for hospitals, garages, and large warehouse spaces that also operate as retail locations. Besides the health benefit of not breathing in emissions, the M17 can also save money with a lower ownership cost. Instead of a year full of fuel, storage, and engine maintenance expenses, you only need to replace the battery every few years. Lastly, the noise level of the M17 is much lower than propane-powered sweeper-scrubbers. All of these features make the M17 a popular choice for noise-sensitive environments, such as hospitals and retail stores.

An innovative, high-performance battery sweeper-scrubber focused on delivering customized solutions to meet customer needs. The M17 cleans effectively in just one pass, enhances indoor air quality, and improves operator and supervisor experience, all in one machine!

The reconditioned Tennant M17 sweeper scrubber is fully rebuilt to perform like new. These used floor scrubbers are thoroughly rebuilt and serviced, replacing or servicing all critical parts. Backed by SES Certified warranty.

Condition: Refurbished (Reconditioned). Learn more about [Our Reconditioning Process Here](#).

Features

- Reduce time spent on maintenance with easy, no-tool access to all squeegees, brushes and filters.
- Reduce operator errors and ensure consistent cleaning results with QA Controls® that lock in preferred cleaning settings and deactivate operator adjustments.
- Powered high dump eliminates the need to manually handle debris and enables you to place larger debris into the hopper for later disposal.
