Districts should look at all of their operations with a view toward minimizing pest populations.

The Minnesota Department of Agriculture in cooperation with IPM in k-12 Schools Working Group will develop a set of IPM fact sheets and check lists designed for Minnesota k-12 schools conduct state-wide regional workshops of school health and safety officers and/or other district personnel in lead maintenance roles.

As for the front entrance we would rip out and remove 3 trees and rip out and remove approximately 3300sqft of concrete im going off a sqft price so if the sqft changes the price will change accordingly. I will hire someone to come in with semis and haul it out Grand total materials and labor comes to \$10,500.00 to do as described above.

To repour 3300sqft we would make sure the sub soil is acceptable. (Im hoping because the old concrete doesn't look busted up too bad the subgrade will be ok. If we need to core out the subgrade there will be additional costs for gravle and moving current subgrade out.) We would set forms finegrade everything. Place 1/2" grade 60 steel rebar 24"on center both directions throughout entire slab we would tie into any existing concrete that we pour up against. We will place proper expansion where needed against the building. We will give a light brush finish for traction in the winter. And place control cuts approximately every 10' or where needed to help control any cracking we would pour this 5" thick with a 5000psi concrete mix.

We will remove all garbage and level off all the dirt. We will not seed grass. This is based on a sqft price if the sqft changes the price will change accordingly.

Grand total labor and materials to do as described above comes to \$36,300.00
